

ElectroClave™ UV-C Sanitization System

## Improve Sanitization and Ensure Long-Term Durability of High-Touch Devices

The ElectroClave™ by Seal Shield is the first all-in-one UV-C sanitizing and device management solution for high-touch mobile devices, including Zebra mobile computers, rugged tablets, printers and handheld scanners. By combining sanitization with device management, ElectroClave gives healthcare organizations an easy, effective way to track device status while boosting patient and caregiver safety.

### More Effective Sanitization

ElectroClave uses a 360-degree shadowless, mercury-free LED UV-C system that is 99.9% effective against staphylococcus, escherichia coli, MRSA and CRE on hard, non-porous surfaces. And it does this without damage to the surface or function of mobile electronics.

### Protect Long-Term Durability

Sanitizing tools that use heat-generating mercury lamps can discolor and weaken the plastics used in many devices. However, lab testing proves that the UV-C LEDs used by ElectroClave protect the long-term durability of the devices used in healthcare applications.

### Integrated Device Management

With ElectroClave, mobile device management is seamlessly integrated into device sanitization. Device cleaning schedules, updates and status are tracked with customizable reports delivered to administrators' inboxes for real-time visibility and compliance tracking.

- 99.9% effective against staphylococcus, escherichia coli, MRSA and CRE on hard, non-porous surfaces

- 360-degree LED UV-C system improves sanitization and eliminates the potential damage caused by heat-generating mercury lamp systems

- Integrated device management tools improve tracking and compliance

- Use optional UHF RFID capability for a total tracking solution

ElectroClave is the simple, convenient way to sanitize high-touch healthcare devices, including Zebra mobile computers, rugged tablets, printers and barcode scanners.

PURPOSE-BUILT FOR HEALTHCARE

## Combine ElectroClave™ by Seal Shield with Zebra's Purpose-Built Mobile Computers, Rugged Tablets, Printers and Barcode Scanners

Equip your healthcare team with Zebra solutions specifically engineered for rigorous, frequent cleaning and sanitizing.

Zebra delivers the ultimate in mobile technology for healthcare applications, with a complete portfolio of mobile computers, rugged tablets, scanners and printers that make it easy for healthcare workers to collect and retrieve patient data and connect with other caregivers. **And Zebra's healthcare devices are purpose-built to withstand frequent cleaning, including UV-C sanitization with ElectroClave by Seal Shield.**

Built-in durability withstands everyday drops and bumps.

Power through long shifts with long-lasting batteries.

Resist infection with durable wristbands.

UV-resistant housings support UV cleaning protocols.

Reduce the spread of infection with medical-grade plastics.

Features designed for quiet, unintrusive performance in sensitive environments.

Seal Shield is the world leader in innovation, development and manufacturing of industrial-grade solutions, including waterproof keyboards and mice, UV-resistant multilayer screen protectors, advanced polymer materials, and UV-C Sanitization Systems for portable devices and equipment.
